Algebra can essentially be considered as doing computations similar to those of arithmetic but with non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra belongs to the theory of equations and is not, nowadays, considered as belonging to algebra (in fact, every proof must use ...

Plato web answer key?

Most of the time when someone says "word problems" there is automatic panic. But word problems do not have to be the worst part of a math class.

Translating Word Problems into Equations - AlgebraLAB

Be careful with this notation for individual entries, since it is easy to think that $\text{matrixentry}\{A\}{ij}$ refers to the whole matrix. It does not. It is just a number, but is a convenient way to talk about the individual entries simultaneously. This notation will get a heavy workout once we get to Chapter M.

A First Course in Linear Algebra

What are intercepts and how do you find them? Intercepts are where a graph crosses either the x-axis or the y-axis. Not all functions will have intercepts, but when you are working with the graph of a linear function, it will have both an x-intercept and a y-intercept. An x-intercept is where the graph crosses the x-axis and a y-intercept is where it crosses the y-axis.
