Wastewater Solutions

Wastewater treatment is a process used to remove contaminants from wastewater or sewage and convert it into an effluent that can be returned to the water cycle with minimum impact on the environment, or directly reused. The latter is called water reclamation because treated wastewater can then be used for other purposes. The treatment process takes place in a wastewater treatment plant (WWTP ...

Wastewater treatment - Wikipedia

Most industrial manufacturing processes create wastewater that must be at least partially cleaned prior to discharge. Because of the broad range of possible pollutants, regulations that can vary by location, and the cost impacts of differing treatment approaches, there is no “one size fits all” package.
