The Brønsted–Lowry theory is an acid–base reaction theory which was proposed independently by Johannes Nicolaus Brønsted and Thomas Martin Lowry in 1923. The fundamental concept of this theory is that when an acid and a base react with each other, the acid forms its conjugate base, and the base forms its conjugate acid by exchange of a proton (the hydrogen cation, or H^+).

Nucleic acids are the biopolymers, or small biomolecules, essential to all known forms of life. The term nucleic acid is the overall name for DNA and RNA. They are composed of nucleotides, which are the monomers made of three components: a 5-carbon sugar, a phosphate group and a nitrogenous base. If the sugar is a compound ribose, the polymer is RNA (ribonucleic acid); if the sugar is derived ...

You can calculate the correlation between two variables by a measurement known as the Pearson Product Moment Correlation (also called Pearson's correlation or Spearman rank correlation). You may know that you can make this calculation, often designated by the letter "r," using statistical software, such as SPSS or R. But did you know that you can even do it with good-old Microsoft Excel?
