Evolution is the supposed process by which the first cell evolved into the diversity of life we see today. Natural selection and mutations are considered its driving force. However, evolution has never been observed and natural selection and mutations cannot add the information necessary to change one kind into another.

### **Evolution | Answers in Genesis**

Chordata: More on Morphology. All chordates share four basic features. Chordates derive their name from one of their synapomorphies, or derived features indicating their common ancestry. This is the notochord, a semi-flexible rod running along the length of the animal. In those chordates which lack bone, muscles work against the notochord to move the animal.

### **Morphology of the Chordata - UCMP**

A Place for Life: A special astronomy exhibit of Understanding Evolution Biology and paleontology provide an increasingly detailed picture of the evolution of life. Natural selection has resulted in a huge range of organisms living in a multitude of environments, and the geological record shows us how the Earth as a whole has changed over time.
