Below are a number of worksheets covering elementary algebra problems. Elementary Algebra is about manipulating mathematical expressions, with quantities represented by symbols e.g x, y or z. Using symbols instead of numbers makes it possible for work in a general rather than a specific way, and it allows us to manipulate and rewrite the relationships between quantities in different ways.

Algebra can essentially be considered as doing computations similar to those of arithmetic but with non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra belongs to the theory of equations and is not, nowadays, considered as belonging to algebra (in fact, every proof must use ...

An ellipse is a curve that is the locus of all points in the plane the sum of whose distances  $r_1$  and  $r_2$  from two fixed points  $F_1$  and  $F_2$  (the foci) separated by a distance of  $2c$  is a given positive constant  $2a$  (Hilbert and Cohn-Vossen 1999, p. 2). This results in the two-center bipolar coordinate equation  $r_1 + r_2 = 2a$ , (1) where  $a$  is the semimajor axis and the origin of the coordinate system ...

Graphing Quadratics (Parabolas) Before we talk specifically about the Vertex and Factored forms, let's first create a t-chart so we can graph the simplest form of a parabola, which is  $y = x^2$ . Note that parabolas have symmetry; it is a mirror image of itself across the vertical line (called the line of symmetry, or LOS, or sometimes called the axis of symmetry) that contains its vertex.
