Thirty to 40% of interventions have no reported evidence-based and, alarmingly, another 20% of interventions provided are ineffectual, unnecessary, or harmful. 1 The gap between research and practice has been well documented in systematic reviews 1 across multiple diagnoses, specialties, and countries. Surveys confirm that, unfortunately, the research-practice gap occurs within the ...

In statistics, a full factorial experiment is an experiment whose design consists of two or more factors, each with discrete possible values or "levels", and whose experimental units take on all possible combinations of these levels across all such factors. A full factorial design may also be called a fully crossed design. Such an experiment allows the investigator to study the effect of each ...
