Because solving two-step equations is the first time your students have to think beyond one mathematical step to get what they need as an answer. The further they go in their math career the more steps problems require to be solved. If they do not have a grasp of two-step equations it will be impossible for them to move on.

Improve your math knowledge with free questions in "Solve linear equations" and thousands of other math skills.

IXL - Solve linear equations (Algebra 2 practice)

Since the first equation already has y isolated on the left side, it will be easier to use the substitution method than the elimination method to solve the system of equations. To begin, substitute the left side of the first equation, $-3x+4$, for y into the second equation, and then solve for x . $x + 4y = -6$ $x + 4(-3x + 4) = -6$
