In fluid mechanics, non-dimensionalization of the Navier–Stokes equations is the conversion of the Navier–Stokes equation to a nondimensional form. When skillfully performed, this eases the analysis of the problem which is at study, and reduces the number of free parameters. Small or large sizes of certain dimensionless parameters indicate the importance of certain terms in the equations for ...

In aeronautics, a propeller, also called an airscrew, converts rotary motion from an engine or other power source into a swirling slipstream which pushes the propeller forwards or backwards. It comprises a rotating power-driven hub, to which are attached several radial airfoil-section blades such that the whole assembly rotates about a longitudinal axis.
