Stratum Basale. The stratum basale (also called the stratum germinativum) is the deepest epidermal layer and attaches the epidermis to the basal lamina, below which lie the layers of the dermis. The cells in the stratum basale bond to the dermis via intertwining collagen fibers, referred to as the basement membrane. A finger-like projection, or fold, known as the dermal papilla (plural ...

5.1 Layers of the Skin - Anatomy and Physiology

Introduction. Evidence of nitric oxide (NO) synthesis by human skin cells was first reported just over 10 years ago. Since that time, and from a proposed role in non-specific host defense, it is now clear that NO plays a key role in orchestrating the skin's response to external stimuli such as heat, ultraviolet (UV) light, response to infection, and wound healing, as well as possibly ...

Of main interests to us is the use of mining as a part of in-situ resource utilization, that is: making it easier to industrialize and colonize space by removing the need to pay the sky-high delta-V cost of lugging raw materials up Terra's gravity well.. But in the early stages, asteroid mining start-ups cannot be established to provide minerals to space industrialization because there won't ...
