Human Brain - Neuroscience - Cognitive Science The Human Brain is the most Complex Processor of Information on the Planet. Our ability to Process Information and Store Information, , is what makes us Human. Information Defines us, Information Controls us, Information Teaches us. Know your Processor, understand the Software (), and understand the Hardware ().

Human Brain - Neuroscience - Cognitive Science

1. Introduction. Death is a common fate of all life, from organisms to cells. The understanding that cell death can be regulated by molecular mechanisms and can yield physiological benefits and pathological consequences for multicellular organisms emerged early in the 1960s, with the concept of 'programmed cell death' , , . It is now established that such programmed cell death is essential ...

The development of the concept of ferroptosis - ScienceDirect

The concept of the brain-gut axis emerged in the 19th and early 20th centuries from the pioneering observations of Beaumont, Darwin, and Cannon in tandem with the now classical physiological studies of Ivan Pavlov 4, 5. More recently, given the realization of the importance of the microbiota in modulating health, the brain-gut axis has been extended to the microbiota-gut-brain axis 6, 7 ...

General. The existence of receptors for opiate drugs was first proposed in 1954 by Beckett and Casy [] based on their studies of structure-activity relationships for antinociceptive activity in a series of synthetic opiates. These receptors are called 'opioid' since we now know their endogenous ligands are peptides with effects resembling those of opiate drugs.
