To make a current flow through a resistance there must be a voltage across that resistance. Ohm's Law shows the relationship between the voltage (V), current (I) and resistance (R). Ohm's Law can be written three ways:

### **Electronics Club - Ohm's Law, $V = I \times R$**

Ohm's Law is given by:  $V = I R$ . where V is the potential difference between two points which include a resistance R. I is the current flowing through the resistance. For biological work, it is often preferable to use the conductance,  $g = 1/R$ ; In this form Ohm's Law is:  $I = g V$ . 2.
