15 Water And Aqueous Systems

Aqueous biphasic systems (ABS) or aqueous two-phase systems (ATPS) are clean alternatives for traditional organic-water solvent extraction systems.. ABS are formed when either two polymers, one polymer and one kosmotropic salt, or two salts (one chaotropic salt and the other a kosmotropic salt) are mixed at appropriate concentrations or at a particular temperature.

Surfactants are surface active agents, in the sense that they preferentially adsorb at the air/solution interface in an aqueous solution at low concentration. Water has a very high surface tension (γ) arising out of the strong cohesive interaction among the water molecules as a result of the extensive intermolecular hydrogen bonding network among themselves.

Water is a transparent, tasteless, odorless, and nearly colorless chemical substance, which is the main constituent of Earth's streams, lakes, and oceans, and the fluids of most living organisms. It is vital for all known forms of life, even though it provides no calories or organic nutrients. Its chemical formula is H_2O , meaning that each of its molecules contains one oxygen and two hydrogen ...

The effects of ions on biological and chemical processes in aqueous solution f usually depend on the particular ions involved. These specific ion effects make up the Hofmeister phenomena [1827, 2225, 2924].g The Hofmeister series [], below, originates from the empirical and qualitative ranking of various ions toward their ability to precipitate a mixture of hen egg white proteins.
