rest of the solar system ranges between 0.4 AU (from Mercury to the Sun) to 39.3 AU (from Pluto to the Sun). When leaving the solar system and looking at other star systems, the AU is too small for scientists's needs. So they created a LARGER unit of measurement. Scientists measure a light-year as the distance light can travel in one year.

The solar system includes a huge volume of space that stretches in all directions from the Sun. Because the Sun contains 99.86 percent of the mass of the solar system, its gravity is immense. The Sun's gravity holds the planets and other objects in the solar system in their orbits. Figure 1 Each of the eight planets in the solar system is ...
