In this section we look at factoring polynomials a topic that will appear in pretty much every chapter in this course and so is vital that you understand it. We will discuss factoring out the greatest common factor, factoring by grouping, factoring quadratics and factoring polynomials with degree greater than 2.

Example: what are the factors of $6x^2 - 2x = 0$? 6 and 2 have a common factor of 2: $2(3x^2 - x) = 0$. And x^2 and x have a common factor of x : $2x(3x - 1) = 0$. And we have done it! The factors are $2x$ and $3x - 1$. We can now also find the roots (where it equals zero): $2x$ is 0 when $x = 0$; $3x - 1$ is zero when $x = 1/3$; And this is the graph (see how it is zero at $x=0$ and $x= 1/3$):

#2: Factor the following problem completely. In this problem, the greatest common factor includes both numbers and variables. First we need to factor out the greatest number that will divide into both 15 and 9. In this case, it will be a 3. Next we need to factor out the smallest power of the variable x that can be seen in the problem. In this case, it will be .
