The time, space and velocity scales are important in determining the importance of the Coriolis force. Whether rotation is important in a system can be determined by its Rossby number, which is the ratio of the velocity,  $U$ , of a system to the product of the Coriolis parameter,  $f$ , and the length scale,  $L$ , of the motion:  $R = U/fL$ . The Rossby number is the ratio of inertial to Coriolis forces.
