10 Examples of Solids, Liquids, Gases, and Plasma

Liquids are less common than solids, gases, and plasmas. The reason is that the liquid state of any substance can exist only within a relatively narrow range of temperature and pressure. the same substance may exist in three states. for example, water in the form of ice is solid; in the form of steam is gas, while a usual form of water is liquid.

Solids and liquids have particles that are fairly close to one another, and are thus called "condensed phases" to distinguish them from gases. Density: The molecules of a liquid are packed relatively close together. Consequently, liquids are much denser than gases. The density of a liquid is typically about the same as the density of the solid ...
