Pharming, a portmanteau of "farming" and "pharmaceutical", refers to the use of genetic engineering to insert genes that code for useful pharmaceuticals into host animals or plants that would otherwise not express those genes, thus creating a genetically modified organism (GMO). Pharming is also known as molecular farming, molecular pharming or biopharming.

Pharming (genetics) - Wikipedia

The Personal Genetics Education Project raises awareness and sparks conversation about the potential benefits as well as the ethical, legal, and social implications of personal genetics. We strive to be inclusive of all voices in these discussions, regardless of socioeconomic or educational background, cultural or religious affiliation, and ethnic or personal identity.
