The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14–16 billion neurons, and the estimated number of neurons in ...

Neuroplasticity and brain function after acquired brain injury - Probably the easiest way to conceptualize neuroplasticity after injury to the brain is to view it simply as re-learning (Plowman and Kleim, 2010; Warraich and Kleim, 2010). As Kleim (2011) noted, "the brain will rely on the same fundamental neurobiological process it used to acquire those behaviors initially.

Main Text Introduction. Alzheimer's disease (AD) impairs cognition, memory, and language and causes dementia. In 1907, Aloïs Alzheimer described the extensive distribution of neuronal tangles and amyloid plaques in brain that, together with astrogliosis, neuronal dystrophy, neuronal loss, and vascular alterations, constitute the hallmarks of the disorder.

Summary. A little over 50 years ago, Sydney Brenner had the foresight to develop the nematode (round worm) *Caenorhabditis elegans* as a genetic model for understanding questions of developmental biology and neurobiology. Over time, research on *C. elegans* has expanded to explore a wealth of diverse areas in modern biology including studies of the basic functions and interactions of eukaryotic ...

Bow and lyre alike owe their usefulness to a double tension. Each of them works by pulling the two ends of a string in opposite directions, creating what we might call static tension (the bow bends because the string's length is fixed). Once the string is 'tuned' in this way, it can be plucked - bent back and released - thus harnessing the energy latent in the static tension to send ...
