The solutions are for radial heat conduction with heat transfer at the inner radius or slab heat conduction with heat transfer at one boundary. In both types of conduction it is assumed that the boundary opposite the heat-transfer surface is thermally insulated. The radial solutions cover a range of dimensionless radius ratios.

The transfer of heat through a medium by conduction can usually be described by Fourier's law, which is stated  $q'' = -k \nabla T$  (1.7) The quantity  $k$  is referred to as the thermal conductivity of the medium, and has units of  $W/m \cdot K$ . Fourier's law does not have the same 'legal' standing as, say, the first law of thermodynamics.
