A theory of everything (TOE or ToE), final theory, ultimate theory, or master theory is a hypothetical single, all-encompassing, coherent theoretical framework of physics that fully explains and links together all physical aspects of the universe.: 6 Finding a TOE is one of the major unsolved problems in physics. Over the past few centuries, two theoretical frameworks have been developed that ...

No single answer to the question "What is light?" satisfies the many contexts in which light is experienced, explored, and exploited. The physicist is interested in the physical properties of light, the artist in an aesthetic appreciation of the visual world. Through the sense of sight, light is a primary tool for perceiving the world and communicating within it.

5. Dimension 3 DISCIPLINARY CORE IDEAS—PHYSICAL SCIENCES. Most systems or processes depend at some level on physical and chemical subprocesses that occur within it, whether the system in question is a star, Earth's atmosphere, a river, a bicycle, the human brain, or a living cell. Large-scale systems often have emergent properties that cannot be explained on the basis of atomic-scale ...

From basic intuition you would expect two things from the atom: 1) Since positively charged protons are packed together in the nucleus, why doesn't the nucleus just explode apart...? 2) Since electrons are attracted to protons, why don't the electrons fall into the nucleus...? (Not covered in A-level courses) The answer to 1 is called the 'Strong Nuclear Force'.

What is quantum mechanics? "The quantum is the greatest mystery we've got.Never in my life was I more up a tree than today," John Wheeler. Quantum theory is bizarre. In order to try and understand it we need to forget everything we know about cause and effect, reality, certainty, and much else besides.

Bubble sort is not an easy sort algorithm for people to understand. From both my own experience and experience teaching, I can confidently say that insertion sort, selection sort, min-sort (minimum element sort), even (for some students) mergesort and quicksort are easier to understand — after all, they correspond to somewhat natural ways of sorting a list, but bubble sort is just artificial.

Heat travels only from hot to cold. Carnot's principle. In 1824, Sadi Carnot gave a fundamental limitation of steam engines by analyzing the ideal engine now named after him, which turns out to be the most efficient of all possible heat engines. This result is probably best expressed with the fundamental thermodynamical concepts which were fully developed after Carnot's pioneering work ...
