The addition or multiplication of a several numbers is the same regardless of how the numbers are grouped. The associative property will always involve 3 or more numbers.

Commutative, Distributive, and Associative properties ...

In linear algebra, an n -by- n square matrix A is called invertible (also nonsingular or nondegenerate) if there exists an n -by- n square matrix B such that $AB = BA = I_n$ where I_n denotes the n -by- n identity matrix and the multiplication used is ordinary matrix multiplication. If this is the case, then the matrix B is uniquely determined by A and is called the inverse of A , denoted by A^{-1} .

A circle packing is an arrangement of circles inside a given boundary such that no two overlap and some (or all) of them are mutually tangent. The generalization to spheres is called a sphere packing. Tessellations of regular polygons correspond to particular circle packings (Williams 1979, pp. 35-41). There is a well-developed theory of circle packing in the context of discrete conformal ...
