Numerical methods John D. Fenton a pair of modules, Goal Seek and Solver, which obviate the need for much programming and computations. Goal Seek, is easy to use, but it is limited – with it one can solve a single equation, however complicated or however many spreadsheet cells are involved, whether the equation is linear or nonlinear.

Numerical methods for ordinary differential equations are methods used to find numerical approximations to the solutions of ordinary differential equations (ODEs). Their use is also known as "numerical integration", although this term is sometimes taken to mean the computation of integrals.Many differential equations cannot be solved using symbolic computation ("analysis").

"How High the Moon" is a jazz standard with lyrics by Nancy Hamilton and music by Morgan Lewis. It was first featured in the 1940 Broadway revue Two for the Show, where it was sung by Alfred Drake and Frances Comstock. In Two for the Show, this was a rare serious moment in an otherwise humorous revue.

Background Backpropagation is a common method for training a neural network. There is no shortage of papers online that attempt to explain how backpropagation works, but few that include an example with actual numbers. This post is my attempt to explain how it works with a concrete example that folks can compare their own calculations...

Styles of Speech. Here we have 54 words referring to manners or styles of speaking, words that use the suffix '-loquent', '-loquence', or '-loquy', from Latin loqui (to speak). While in an age of text-messaging, public speaking has lost its once-vaunted status as a communication medium, as long as people meet face to face, others will judge them on their manner of speech.
