IEEE 802 is a family of IEEE standards dealing with local area networks and metropolitan area networks.. More specifically, the IEEE 802 standards are restricted to networks carrying variable-size packets. By contrast, in cell relay networks data is transmitted in short, uniformly sized units called cells. Isochronous networks, where data is transmitted as a steady stream of octets, or groups ...

A traditional home network having one wireless router can cover a single-family dwelling but often not much more. Business networks with grids of access points can cover large office buildings. And wireless hotspots spanning several square miles (kilometers) have been built in some cities. The cost to build and maintain these networks increases significantly as the range increases, of course.

What is the Range of a Typical Wi-Fi Network?
As will be clear from the above, because the Brethren have remained a movement and because the different sections have had over 100 years of separate and independent evolution, one of their features is their variety, making it difficult to give a simple answer to the question 'Who are the Brethren?'.
