Ping is a computer network administration software utility used to test the reachability of a host on an Internet Protocol (IP) network. It is available for virtually all operating systems that have networking capability, including most embedded network administration software.

ping (networking utility) - Wikipedia

Important! This experiment has a tendency to stay "swapped in" because the nodes on the system appear to be "busy". We don't want our labs to waste DETER resources, so in order to make sure that unused nodes are not left idle, the maximum amount of time this lab will stay swapped in at once is six hours.If you need it for more than six hours in one sitting, you will need to swap out and back ...

Biamp Training - InPerson and Online Training ...

As you noticed from the previous articles, lately I have been playing with some various tunnelling techniques and today I am presenting MACSEC. Most of the documentation resources about MACSEC implementation on the web, at this moment, are the ones showing various vendors implementation, especially Cisco's approach. Although it's not a new topic, Linux support for

MACSEC was added only recently.

MACsec Implementation on Linux - CostiSer.Ro
Question #1: If Host A sends a frame to Host B, will Host B receive it? Question #2: If Host A sends a Broadcast, which hosts will receive it? The answers and an explanation are provided below. Remember, the goal isn't simply to get the answer right, but to be able to understand why.If you can explain the answers to both of these questions to someone else, then you know you will have ...
