Analog-to-digital converter. An analog-to-digital converter (ADC) can be modeled as two processes: sampling and quantization. Sampling converts a time-varying voltage signal into a discrete-time signal, a sequence of real numbers.Quantization replaces each real number with an approximation from a finite set of discrete values.

The human nervous system consists of billions of neurons of various types and lengths relevant to their location in the body (Schalkoff, 1997).Fig. 1a shows a schematic of an oversimplified biological neuron with three major functional units — dendrites, cell body, and axon. The cell body has a nucleus that contains information about heredity traits, and a plasma that holds the molecular ...
