Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Introduction. The concept of instrumental variables was first derived by Philip G. Wright, possibly in co-authorship with his son Sewall Wright, in the context of simultaneous equations in his 1928 book The Tariff on Animal and Vegetable Oils. In 1945, Olav Reiersøl applied the same approach in the context of errors-in-variables models in his dissertation, giving the method its name.

1. Introduction. The gravity equation has long dominated the international trade literature as the main econometric approach toward estimating ex post the "partial" (or direct) effects of economic integration agreements and other natural and policy-based bilateral trade costs on aggregate bilateral trade flows. 1 Economic integration agreements (EIAs) refer broadly to preferential trade ...

In statistics, maximum likelihood estimation (MLE) is a method of estimating the parameters of a statistical model, given observations.The method obtains the parameter estimates by finding the parameter values that maximize the likelihood function.The estimates are called maximum likelihood estimates, which is also abbreviated as MLE.. As an example, suppose that we are interested in the ...

This article analyses how horizontal mergers affect innovation of the merged entity and its non-merging competitors. Using data on horizontal mergers among pharmaceutical firms in Europe and applying propensity score matching estimators, we find that average patenting and R&D of the merged entity and its rivals declines substantially in post-merger periods.

Analysis of Variance: response is a series measuring some effect of interest and treatment must be a discrete variable that codes for two or more types of treatment (or non-treatment). For two-way ANOVA, the block variable (which should also be discrete) codes for the values of some control variable.. Unless the --quiet option is given, this command prints a table showing the sums of squares ...
