From my point of view, the extreme controller web interface should be changed/redesigned so that today's screen resolutions can be used in a better way. I have a 4k display and the usable rectangle is very small (despite that there is a huge white space). Especially the AP list does not fit onto the screen (someone has to scroll).

POMDP-Solve. This is a Julia wrapper for the POMDP-Solve program, orginally developed at Brown University that uses the POMDPs.jl interface. This package uses the code available from Tony Cassandra's pomdp.org page.. The pomdp-solve program solves partially observable Markov decision processes (POMDPs), taking a model specification and producing a value function and action policy.

An implementation of QMDP for POMDP domains. This is a fast approximation method that has the agent acting as though it would obtain perfect knowledge of the state in the next time step. It works by solving the underling fully observable MDP, and then setting the Q-value for belief states to be the expected fully observable Q-value.
