Numato Lab's 16 Channel USB Relay Module is a great product for controlling electrical and electronic devices remotely from a PC or Mobile Device over USB link. Ease of use and wider operating system compatibility are the primary goals behind this product's design. Built in USB to serial conversion allows the module to be used without any USB specific knowledge.

objdump¶. Detailed information about the instruction that generated the oops can be found using the objdump utility. Useful options to use are -d to disassemble the code and -S for interleaving C code in assembly language code. For efficient decoding, however, we need the address where the kernel module was loaded.
