We know that an exponential function is any pattern of numbers that is continuously multiplied by something - for example 3, 6 (3*2), 12 (3*4), 24 (3*8).

Exponential Growth vs. Decay - Video & Lesson Transcript ...

In this video, I want to introduce you to the idea of an exponential function and really just show you how fast these things can grow. So let's just write an example exponential function here. So let's say we have y is equal to 3 to the x power. Notice, this isn't x to the third power, this is 3 to ...

In mathematics, a generating function is a way of encoding an infinite sequence of numbers (a n) by treating them as the coefficients of a power series.This formal power series is the generating function. Unlike an ordinary series, this formal series is allowed to diverge, meaning that the generating function is not always a true function and the "variable" is actually an indeterminate.

In demographics, the world population is the total number of humans currently living, and was estimated to have reached 7.7 billion people as of April 2019. It took over 200,000 years of human history for the world's population to reach 1 billion; and only 200 years more to reach 7 billion.. World population has experienced continuous growth since the end of the Great Famine of 1315–1317 and ...

The numbers get bigger and converge around 2.718. Hey... wait a minute... that looks like e! Yowza. In geeky math terms, e is defined to be that rate of growth if we continually compound 100% return on smaller and smaller time periods:. This limit appears to converge, and there are proofs to that effect. But as you can see, as we take finer time periods the total return stays around 2.718.
